Improved order list

Developed by: Dream me up (www.dream-me-up.com)

Module overview

Optimize order preparation by reducing the number of clicks.

Save time by hovering over and displaying order information without going into detail.

The benefits

With the help of the module developed by Dream me up, you can manage your stocks with precision and ensure on-time delivery to your customers.

- ➢ **Smoother**: customize order display by status (orders in progress, orders completed).
- ➢ **Clearer**: process orders according to priority.
- ➢ **More intuitive**: simply hover over orders to view essential information.

- **Save time when preparing your orders**

A quick view of the contents of validated baskets, so you can quickly collate them.

Save time processing your orders! Avoid having to enter each order one after the other to get all the details. This module lets you know everything...

- **Save time on order processing**

Avoid having to enter each order one after the other to get all the details.

This module lets you know everything from your order list.

- **Optimize your order processing time!**

Benefit from an intuitive interface that saves you time managing your orders!

Features

- **Quick view of information**

Using filters, you can either get an overview of all orders, or filter them according to their status. Roll over to preview :

- ▪ Customer name, recipient name and address
- ▪ Basket contents with product, quantity, price attributes (color, size),
- ▪ Choice of gift packaging and associated message,
- ▪ Customer comments on the order.

You can create different views tailored to your order status, for example: pending orders, orders to be processed, etc...

Mass status updates

The module lets you update multiple statuses with a single click!

- Select the orders concerned
- Choose the status to apply
- Validate and you're done!

Always glued to the bottom of your screen, a bar allows you to mass change statuses, as well as print invoices or delivery notes for selected orders.

Group orders by status

You'll be able to manage status groups that will allow you to display the orders you want, saving you time in processing them according to priority (orders in progress, orders completed).

Configuration example:

- Orders in progress: Orders where you still have preparation or shipping to do.
- Completed orders: Here you can enter all orders already shipped, etc.

The more orders you have to process, the more time this module will save you.

Installation

Copy the files to PrestaShop's "Modules" directory. Once installed from your administration area, pull down the "Commands" menu, then click on "Enhanced Commands".

Recommendations

Our guarantees:

We are a PrestaShop agency with a team of experienced PrestaShop developers.

We are committed to responding quickly to user requests and providing quality service.

We aim to provide 100% customer satisfaction with their purchase.

We will also help you with the installation and configuration of the module should this be necessary.

✓ Please feel free to rate and leave feedback on our modules and support. This helps us in the development of new modules and the improvement of already developed modules.

If you have any questions about our module, please send us a message. We'd be more than happy to help.
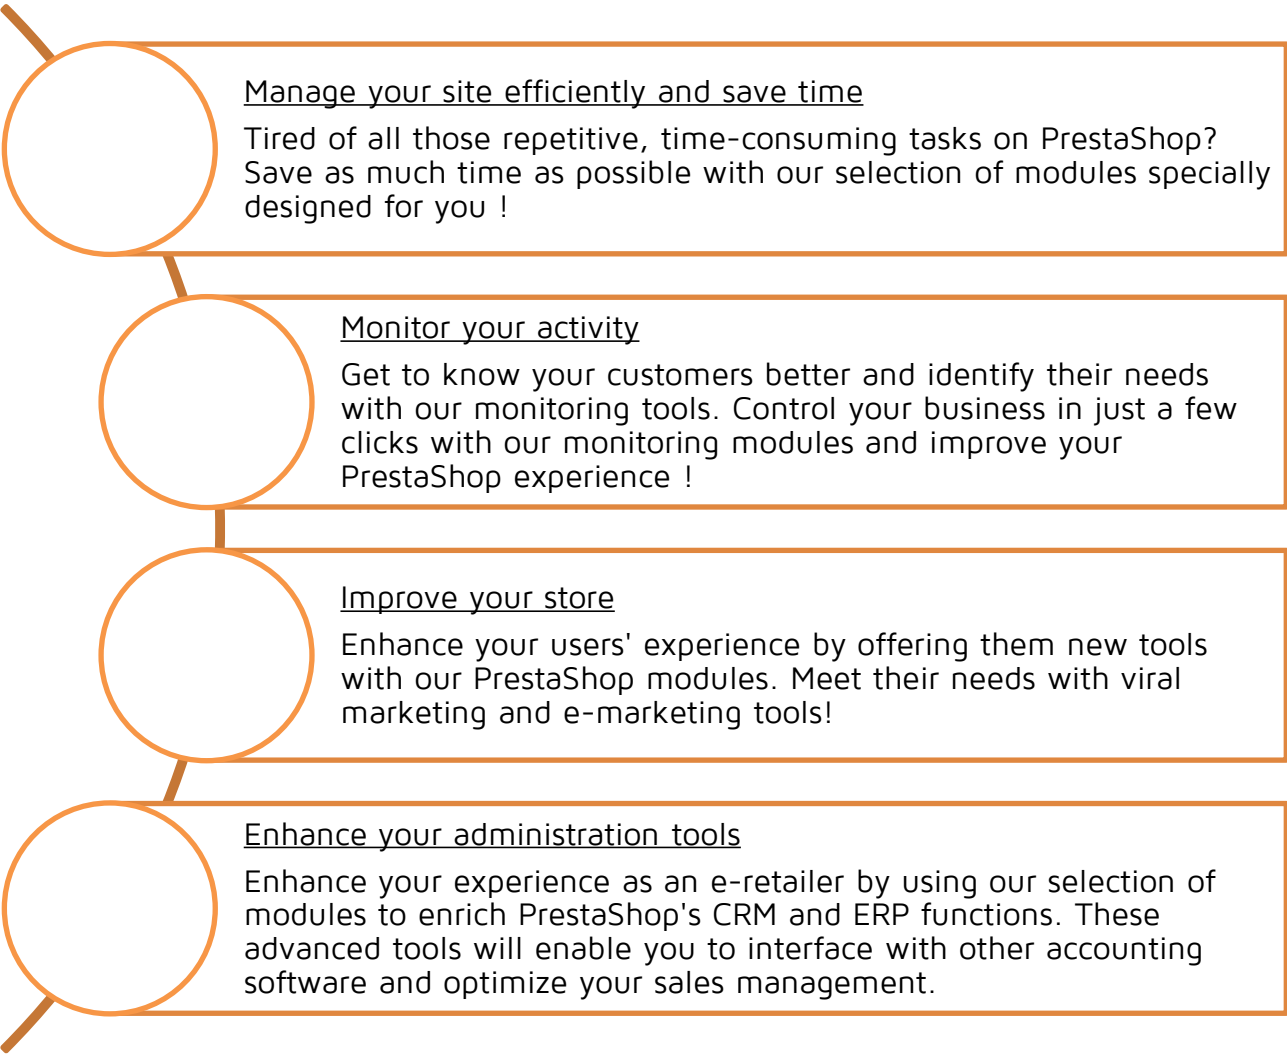

Using the module
